

# SafeMetrics

## Company Profile – Why choose SafeMetrics, LLC?

*Many companies offer safety and health services, but to offer them well in a competitive environment requires elite technical knowledge, an astute understanding of the local markets and a compassion for the client--*

### Company History

SafeMetrics, LLC began in 2006 as a provider of occupational safety and health services. We are based locally in Noblesville, Indiana and service construction, manufacturing, insurance, and biotech companies in the greater Midwest.

### Purpose

SafeMetrics, LLC was built on the concept that to create change, outcomes need to be measured. Health and safety performance differs from many areas measured by companies because safety success is often determined by the absence of an outcome (injuries or ill health) rather than a presence. To meet our clients' goals, outcomes relating to safe behaviors or conditions that avoid or mitigate losses are established and measured. The chosen metrics are based on sound safety principles and customized to meet the goals and challenges of each individual client. SafeMetrics, LLC uses the concept of "measuring to affect change" as the basis for all projects.

### WBE-Certified Company (WBE)

Diversity requirements are becoming more common in today's business environment. Our certification as a Woman-Owned Business Enterprise (WBE) can assist Construction managers, Contractors and Subcontractors in satisfying specific bid requirements.

### Capabilities

SafeMetrics, LLC provides a variety of services that allow their clients to achieve compliance with standards promulgated by regulating agencies such as OSHA, MSHA and EPA as well as best practices set by associations or consensus standards. Measurement of change is an essential characteristic to progress. Yet without confidence, defensibility and data integrity, safety challenges will not likely be met. SafeMetrics, LLC integrates these qualities into every service they offer by employing highly technical professionals, many of who have worked for the various regulating Agencies.

Our team is experienced in a variety of project-oriented environments including working on the Indiana Convention Center Expansion project as both a safety representative to the Owner's team and as the on-site safety professional for a key subcontractor. This project complements the range of industries that we have serviced over our company's history including hospitals, primary metal industries, steel mills, research/laboratories and power plants.
